

G Series

Deutsch

Die G-Serie ist dafür gedacht, Justierungen mit zusätzlicher horizontaler und vertikaler Orientierung durchzuführen. Sie können auch dabei helfen, Windeinfluss besser einzuschätzen.

Die Zielmarken bestehen aus einem roten Punkt in Projektilgröße und einem schwarzen Kreis. Die Marken sind jeweils in der Mitte eines 1-Zentimeter-Gitter platziert.

Zur Kommunikation und Dokumentation sind die Zielmarken nummeriert.

English

The G series is designed for making adjustments with added horizontal and vertical orientation. It can also help gauge wind influence more accurately.

The target markers consist of a red dot the size of a projectile and a black circle. Each marker is positioned at the centre of a 1-centimetre grid.

For communication and documentation purposes, the target markers are numbered.
